

What Delegates said about the Certified OpenPLC Engineers Course at MMU

Andy many thanks for an excellent full two and a half day IEC 61131-3 PLCOpen course, it was a good balance with history, theory and I think the best part: practical examples on the training rigs. Nothing better than to see a batch plant or elevator running after coding it yourself, with you always at hand to give good guidance.

It's a while since I had to work this hard for a certificate. I highly recommend this course to give a good understanding and grounding of IEC 61131-3 programming and application.

All the Best Derek Lane
Systems Manager - WAGO Ltd

As a user of PLCs we found the course both enlightening and informative. It has enabled our department to look at coding processes and update them to provide extensive benefits in terms of time and cost. I would recommend any potential PLC programmers to attend this course, it provides technical information backed up by hands on experience, giving the individual a thorough understanding of IEC 61131-3 coding.

Regards

Mark Carter
Simulator Engineer - Rolls-Royce Marine Electrical Systems

Others, given anonymously on the questionnaires handed in after each course...

A good introduction to a subject – gives me enough knowledge to gain experience and ability (by using it) for myself. The course was conceived and delivered in the excellent and professional manner that we have come to expect from Mr Verwer and his team.

Excellent! Very useful to get a grounding in all aspects.

Very enjoyable – can't get enough of it!
